**Description:**

The SC-FI is a two wire frequency to analog converter that converts a pulse rate input into a 4-20 mA output signal proportional to frequency or rate.

The input pulse rate is amplified and filtered by the input signal conditioning circuitry. Two forms of input signal conditioning are provided, one for magnetic pickups and the other being an isolated pulse input.

The amplified frequency signal is then converted to an analog signal using a precision frequency to analog converter.

The output stage derives its power from the output current loop. The output stage converts the input signal into the desired output range. Multi-turn potentiometers provide for the necessary trimming of span and zero.

## INPUT & OUTPUT SETTINGS

**REMOVING THE CASE:**

The case must be removed to change switch settings. To remove the case proceed as follows:

Refer to FIGURE 1. Using finger tips, carefully pry the case away from the terminal blocks (as shown with dotted lines).

Pry far enough to release the restraining clips on both sides of the case.

Press up on terminal block with thumbs. The assembly will pop out allowing it to be removed from case.

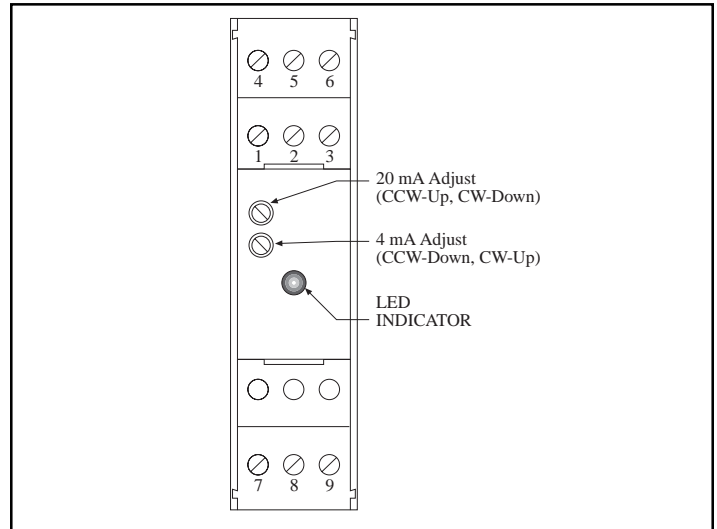

**FIGURE 1:**

**OUTPUT ADJUSTMENTS:**

The unit has two potentiometers for adjustment. The upper potentiometer controls the 20mA setpoint and the lower potentiometer controls the 4mA setpoint (see Figure 2). The 4mA output range can be adjusted from 3mA to 5mA. The 20mA output range can be trimmed from 50% to 100% of the selected range. To adjust the output, initially turn the 20ma adjust 20 turns CW for starting position. Input 0 frequency and adjust the 4 mA pot. Connect your maximum frequency and adjust the 20 mA pot.

**FIGURE 2:**

**RESPONSE TIME SETTING:**

Switch #8 controls the output response time.

<u>Switch #8</u>	<u>Response Time</u>
OFF	0.1 second
ON	1 second

Turn switch #8 ON to provide damping of the output resulting in a 1 second response time.

**INPUT FREQUENCY RANGE SETTINGS:**

The appropriate range is selected by turning "ON" the corresponding switch.

<u>Range:</u>	<u>Switch # "ON"</u>
0-150Hz	1
0-300Hz	2
0-600Hz	3
0-1200Hz	4*
0-2500Hz	5
0-5000Hz	6
0-10000Hz	7

\* Factory Default. The unit is setup at the factory for the range 0-1000Hz.

**LED INDICATOR:**

The SC-FI has a LED which indicates the status of the unit. The table below describes the 3 states for the LED.

<u>LED STATUS:</u>	<u>MEANING:</u>
OFF	The unit is off.
ON (constant)	The unit is loop powered.
BLINKING	The unit is receiving an input frequency. The LED will blink at a rate proportional to the input frequency. (The LED may appear to be constant at high input frequencies)

# "L" Option SPECIFICATIONS

## Description:

The SC-FI with option "L" is a two wire frequency to analog converter that converts a pulse rate input into a 4-20 mA output signal proportional to frequency or rate.

The SC-FI with option "L" is intended for use with lower full scale input frequencies. Full scale frequencies of 15 Hz to 2000 Hz are possible. The unit includes both a contact closure input and an opto-isolated input. Output response time is selectable 1 or 10 seconds.

The amplified frequency signal is then converted to an analog signal using a precision frequency to analog converter.

The output stage derives it's power from the output current loop. The output stage converts the input signal into the desired output range. Multi-turn potentiometers provide for the necessary trimming of span and zero.
